Apply filters to SQL queries

Project description

We need to retrieve specific information about employees, their machines, and the departments they work in from an SQL database. This data is being used to investigate security issues and update user machines.

Retrieve after hours failed login attempts

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_time > '18:00' AND success = 0;
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+

+----------+----------+------------+------------+---------+-----------------+---------+
19 rows in set (0.238 sec)

MariaDB [organization]>
```

First, let's investigate failed login attempts made after business hours. We'll apply the SQL filter:

```
SELECT * FROM log_in_attempts WHERE login_time > '18;00' AND success = 0;
```

This will first fetch all fields in the `log_in_attempts` table, but only show entries made after 6pm (18:00 in computer time) and only if the login attempt was a failure. Successes and failures are denoted by boolean logic values of 1 and 0 respectively.

Retrieve login attempts on specific dates

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_date = '2022-05-09' OR login_date = '20
22-05-08';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+

```

Let's investigate a suspicious event that occurred on 2022-05-09. We also want to retrieve events that happened on the day before: 2022-05-08. We'll input the following request:

```
SELECT * FROM log_in_attempts WHERE login_date = '2022-05-09' OR
login_date = "2022-05-08';
```

This retrieves all login attempts that occurred on either date of 2022-05-09 or the day before it.

Retrieve login attempts outside of Mexico

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE NOT country LIKE 'MEX%';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+
|        1 | jrafael  | 2022-05-09 | 04:56:27   | CAN     | 192.168.243.140 |       1 |

```

Now we need to investigate login attempts that did not occur in Mexico. We'll input the following:

```
SELECT * FROM log_in_attempts WHERE NOT country LIKE 'MEX%';
```

This will retrieve all login attempts that are not from Mexico. Because the column has entries that are written as both `'MEXICO'` and `'MEX'` simply writing `NOT country = 'Mexico'` won't work. It will fail to exclude entries listed as `'MEX'`. This is where `%` comes in. `%` is a wildcard for any number of characters. Therefore writing `NOT country LIKE 'MEX%'` excludes both `'MEX'` and `'MEXICO'` entries.

Retrieve employees in Marketing

```
MariaDB [organization]> SELECT * FROM employees WHERE department = 'Marketing' AND office LIKE 'East%';
+-------------+-------------+----------+------------+----------+
| employee_id | device_id   | username | department | office   |
+-------------+-------------+----------+------------+----------+
|        1000 | a320b137c219 | elarson  | Marketing  | East-170 |
|        1052 | a192b174c940 | jdarosa  | Marketing  | East-195 |
|        1075 | x573y883z772 | fbautist | Marketing  | East-267 |
|        1088 | k8651965m233 | rgosh    | Marketing  | East-157 |
|        1103 | NULL         | randerss | Marketing  | East-460 |
|        1156 | a184b775c707 | dellery  | Marketing  | East-417 |
|        1163 | h679i515j339 | cwilliam | Marketing  | East-216 |
+-------------+-------------+----------+------------+----------+
7 rows in set (0.013 sec)
```

Our team needs to update some company machines. We need information about employees and their devices from the Marketing department in all offices in the East building. Let's put in the following SQL query:

```
SELECT * FROM employees WHERE department = 'Marketing' AND office
LIKE 'East%';
```

Since office numbers are denoted by “(building)-(number)” we need to use the LIKE ‘East%’ filter to find everyone in the East building.

Retrieve employees in Finance or Sales

```
MariaDB [organization]> SELECT * FROM employees WHERE department = 'Finance' OR department = 'Sales';
+-------------+--------------+----------+------------+-------------+
| employee_id | device_id    | username | department | office      |
+-------------+--------------+----------+------------+-------------+
|        1003 | d394e816f943 | sgilmore | Finance    | South-153   |
|        1007 | h174i497j413 | wjaffrey | Finance    | North-406   |
|        1008 | i858j583k571 | abernard | Finance    | South-170   |
|        1009 | NULL         | lrodriqu | Sales      | South-134   |
|        1010 | k2421212m542 | jlansky  | Finance    | South-109   |
|        1011 | l748m120n401 | drosas   | Sales      | South-292   |
|        1015 | p611q262r945 | jsoto    | Finance    | North-271   |

|        1025 | z381a365b233 | jhill    | Sales      | North-115   |
|        1029 | d336e475f676 | ivelasco | Finance    | East-156    |
|        1035 | j236k3031245 | bisles   | Sales      | South-171   |
|        1039 | n253o917p623 | cjackson | Sales      | East-378    |
|        1041 | p929q222r778 | cgriffin | Sales      | North-208   |
|        1044 | s429t157u159 | tbarnes  | Finance    | West-415    |
|        1045 | t567u844v434 | pwashing | Finance    | East-115    |
```

Now we need to do a different system update on all employees devices in the Finance and Sales department. To find both we’ll input:

```
SELECT * FROM employee WHERE department = ‘Finance’ OR department = ‘Sales’;
```

Retrieve all employees not in IT

```
MariaDB [organization]> SELECT * FROM employees WHERE NOT department = 'Information Technology';
+-------------+--------------+----------+-----------------+-------------+
| employee_id | device_id    | username | department      | office      |
+-------------+--------------+----------+-----------------+-------------+
|        1000 | a320b137c219 | elarson  | Marketing       | East-170    |
|        1001 | b239c825d303 | bmoreno  | Marketing       | Central-276 |

|        1003 | d394e816f943 | sgilmore | Finance         | South-153   |
|        1004 | e218f877g788 | eraab    | Human Resources | South-127   |
|        1005 | f551g340h864 | gesparza | Human Resources | South-366   |
|        1007 | h174i497j413 | wjaffrey | Finance         | North-406   |
|        1008 | i858j583k571 | abernard | Finance         | South-170   |
|        1009 | NULL         | lrodriqu | Sales           | South-134   |
|        1010 | k2421212m542 | jlansky  | Finance         | South-109   |
|        1011 | l748m120n401 | drosas   | Sales           | South-292   |
|        1015 | p611q262r945 | jsoto    | Finance         | North-271   |
|        1016 | q793r736s288 | sbaelish | Human Resources | North-229   |
```

Now we need to do one final update. This update was done on every employee device in the IT department already. Let’s filter out the IT department by inputting the following:

SELECT * FROM employee WHERE NOT department = ‘Information Technology’;

Summary

Here, we applied filter to SQL queries to obtain specific information. The `AND`, `OR`, and `NOT` are the main filters for information. The `LIKE` and wildcard (`%`) syntax also filters for patterns inside columns.
